Sash Limiters Installation

DOUBLE HUNG WINDOWS

Tools Required: Phillips Head Screwdriver

INSTALLATION OF SASH LIMITERS

1. The top sash of the double hung window will come routed out and pre-drilled for the sash limiter installation (Figure 1). In order to install them, you will need to remove both sash from the window frame.

2. Place the top sash on a flat work surface.

3. Insert the sash limiters and screw through the side of the sash (Figure 2). The red dot will be facing towards the checkrail on the sash.

4. Reinstall both sash.

5. Place the small silicone pads on the checkrail under the sash limiters (Figure 3). This will prevent damage to the wood when the limiter makes contact with the checkrail.

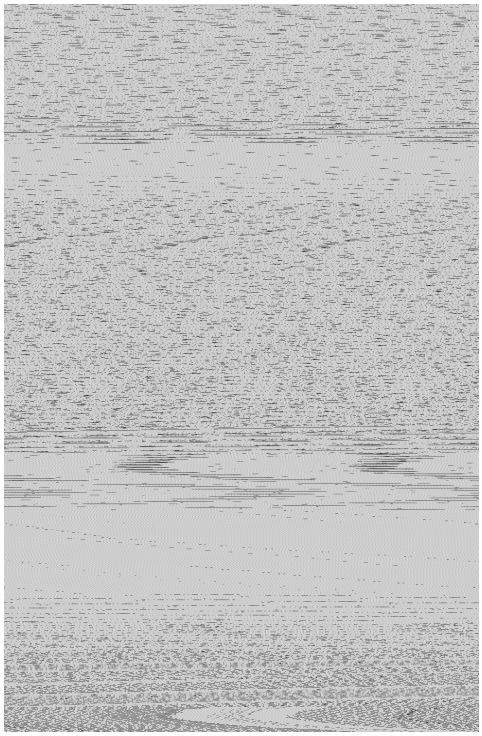

Figure 1

OPERATION

1. To open fully, depress both sash limiters and lift the bottom sash up. When the sash is pulled back down, the sash limiters will automatically pop back out.
